Various writing systems from around the world

The evolution of the mobile phone

making videos and sign language are all methods of communication.

- Humans have invented different technology to help them communicate - some of which were invented in the last 50 years.
- While other animals can communicate with each other, they do not have the language needed to communicate ideas in the same way that we humans have.
- Humans who lived together a long time ago told stories that they passed down over many generations, telling stories has always been very important to humans.
- Humans began to make drawings inside the caves where they lived; these cave paintings were perhaps the first attempt by humans to communicate ideas in a more permanent way.
- Writing originally used pictures to represent words but then began using symbols to show the sounds of our language.
- The first formal sign language that was widely used in Europe was invented in 1755, but it was not an entirely new idea; hand signals had been used to communicate between different tribes in Native America long before this.
- Braille was invented by Louis Braille in France in 1824; it was used as a way for visually impaired people to read and that it uses bumps on a page that represent letters and words.
- The first method of communicating complicated messages over long distances was the telegraph invented in 1837.

**Year 1 Summer Unit: Communication through time**

**Enquiry Question: How has communication changed?**

**Historical Concept: chronology, change & continuity**

**Key Unit Facts:**

• Communication is the act of sharing what you think with other people. There are lots of different ways to communicate that have different advantages and disadvantages. Speaking, using pictures, writing/reading, making videos and sign language are all methods of communication.
